EXPERIENCE

Comergent AI | Antler-backed, Pre-seed Startup

Dec. 2025 – Present

Founding Engineer

Hyderabad, India

- Reduced AI batch API calls by **73%** by replacing naive polling with self-scheduling EventBridge rules using exponential backoff (2ⁿ mins, capped at 120), auto-deleting on completion. Provider-agnostic abstraction supports Claude, OpenAI, and Gemini batch APIs.
- Scaled content generation to **100+ Shopify stores concurrently** by building a LangGraph multi-provider orchestration agent (Python, FastAPI, Claude Sonnet/Haiku, asyncio semaphore) with dual-provider structured output abstraction. OpenAI uses native Structured Outputs, Anthropic uses tool_use with recursive schema patching, both returning identical Pydantic objects. Includes AI-detection evaluation loop and merchant alerting.
- Built a production OTP delivery system on Redis with SHA-256 hashing, 10-minute TTL, and two-layer rate limiting (3 req/min per email, 15 req/min per IP) with async email queuing via dedicated Bull queue, achieving **sub-minute OTP delivery** under load. Part of a GEO report engine running **12 parallel LLM calls** across Claude, GPT-4o, Gemini, and Perplexity per report with a visibility scorer normalizing citation patterns into a 0–100 GEO score.
- Published an npm MCP package (@qressy/qressy-meta-ads-mcp) exposing **40+ Meta Ads tools** to Claude Desktop and Cursor via JSON-RPC 2.0 stdio-to-HTTP bridge. Full MCP protocol in under 200 lines of TypeScript with dynamic tool discovery definitions fetched from remote Lambda at runtime, no local schema registry needed.
- Owned end-to-end engineering: architecture decisions, production deployments, code reviews, system reliability, customer technical escalations, and mentoring junior engineers.

Gressy Solutions

Feb. 2024 – Dec. 2025

Software Development Engineer

Hyderabad, India

- Led product engineering division, coordinating directly with the founder to plan and ship **12+ production Shopify apps** serving **600+ active merchants**. Managed junior engineers and a senior consultant across the division.
- Built a TypeScript CRM microservice (Express, Prisma, MySQL) tracking Shopify app lifecycle events — install, uninstall, plan change — with idempotent find-or-create patterns safe for webhook retries and enum-based EventType constraints enforced at DB level.
- Built a multi-tenant WhatsApp CRM REST API (Node.js, Express, MySQL) handling **bulk contact operations up to 10,000 contacts per request** with per-contact error tracking, full transaction atomicity, and an EAV pivot table giving each tenant flexible custom field schema without migrations. JWT auth, rate limiting, and full Swagger/OpenAPI documentation.

EDUCATION

Jain University

2022 – 2024

MCA in Computer Science | GPA: 9.16/10

Bengaluru, India

SKILLS

Languages: JavaScript/Node.js, TypeScript, Python, Java

AI/LLM: LangGraph, Anthropic Claude SDK, OpenAI SDK, Google Gemini, Perplexity, MCP (Model Context Protocol), Pinecone, Tavily, Bull/Redis

Backend: Express.js, FastAPI, REST APIs, Webhooks, Prisma ORM, Raw SQL, Pydantic

AWS: Lambda, EventBridge Scheduler, ECR, S3, CloudWatch, IAM

Databases: MySQL, MongoDB, Redis

DevOps: Docker, GitHub Actions CI/CD

Shopify: Remix, Polaris, GraphQL Admin API, Bulk Operations API, Storefront API

ACHIEVEMENTS

Founding Engineer at **Comergent AI** Antler-backed pre-seed startup, incorporated as Comergent AI Pte Ltd

Built systems supporting **100+ merchants** and **\$1M+ GMV** on platform

2,772 GitHub contributions in the last year | LeetCode Rating **1552** Top 35% globally
